The Global Market for Ice-Resistant Coatings and Surfaces

Table of contents

1 Introduction.................................................................................................................................................. 10
   1.1 Aims and objectives of the study........................................................................................................ 10
   1.2 Market definition.............................................................................................................................. 10

2 Research methodology.......................................................................................................................... 11

3 Executive summary.................................................................................................................................... 12
   3.1 High performance ice-resistant coatings.......................................................................................... 12
   3.2 Advantages of ice-resistant coating systems.................................................................................... 13
   3.3 Market drivers and trends.................................................................................................................. 13
   3.4 Global market size and opportunity to 2030.................................................................................... 15
      3.4.1 Global revenues for ice-resistant coatings 2010-2030................................................................. 15
      3.4.2 Global revenues for ice-resistant coatings, by market................................................................. 16
      3.4.3 Regional demand for ice-resistant coatings................................................................................ 19
   3.5 Market and technical challenges...................................................................................................... 21

4 Ice-resistant coatings technical analysis.............................................................................................. 23
   4.1 Types of ice-resistant coatings........................................................................................................ 23
      4.1.1 Passive methods......................................................................................................................... 23
      4.1.2 Active methods.......................................................................................................................... 24
   4.2 Production and synthesis methods................................................................................................... 26
   4.3 Hydrophobic coatings and surfaces................................................................................................ 36
      4.3.1 Hydrophilic coatings................................................................................................................... 36
4.3.2 Hydrophobic coatings

4.3.2.1 Properties

4.4 Superhydrophobic coatings and surfaces

4.4.1 Properties

4.4.2 Durability issues

4.5 Superhydrophobicity to icephobicity

4.6 Oleophobic and omniphobic coatings and surfaces

4.6.1 SLIPS

4.6.2 Covalent bonding

4.6.3 Step-growth graft polymerization

4.6.4 Applications

4.7 Self-healing materials

4.8 Phase switching materials

4.9 Soft materials

4.10 Heatable coatings

4.11 Anti-freeze protein coatings

4.12 Graphene coatings

5 Ice-resistant coatings market analysis

5.1 Patent analysis

5.2 Global market for ice-resistant coatings-applications, addressable market size and revenues

5.2.1 Global revenues 2010-2030

5.2.2 Global revenues for ice-resistant coatings, by market

© Future Markets, Inc. 2019
5.2.3 Regional demand for ice-resistant coatings.................................................................................................. 53

5.3 Aviation and aerospace..................................................................................................................................... 56
  5.3.1 Icing on engine components, rotors, and wings.......................................................................................... 56
  5.3.2 Unmanned aerial vehicles (UAVs)............................................................................................................. 57

5.4 Transport.......................................................................................................................................................... 57
  5.4.1 Train......................................................................................................................................................... 57
  5.4.2 Automotive.................................................................................................................................................. 57

5.5 Construction and infrastructure.......................................................................................................................... 58
  5.5.1 Concrete...................................................................................................................................................... 58
  5.5.2 Tunnels and bridges.................................................................................................................................... 58
  5.5.3 Energy-efficient and energy-harvesting buildings......................................................................................... 58

5.6 Marine............................................................................................................................................................. 58

5.7 Energy............................................................................................................................................................. 59
  5.7.1 Wind turbines............................................................................................................................................. 59
  5.7.2 Power transmission...................................................................................................................................... 60
  5.7.3 Heat exchangers.......................................................................................................................................... 61
  5.7.4 Solar panels................................................................................................................................................ 61

5.8 Oil and gas....................................................................................................................................................... 61

6 Notable research in ice-resistant coatings........................................................................................................... 62

7 Company profiles............................................................................................................................................... 63-91
  (50 company profiles)

8 References......................................................................................................................................................... 92
