Table of contents

1 EXECUTIVE SUMMARY 20
1.1 Market Overview 20
1.2 Electronic and Photonic Integration Compared 21
1.3 Silicon Photonic Transceiver Evolution 21
1.4 Market Map 22
1.5 Global Market Trends in Silicon Photonics 25
1.6 Competing and Complementary Photonics Technologies 26
1.6.1 Metaphotonics 29
1.6.2 III-V Photonics 29
1.6.3 Lithium Niobate Photonics 29
1.6.4 Polymer Photonics 30
1.6.5 Plasmonic Photonics 30
1.7 Potential of photonic AI acceleration 30
1.8 Commercial deployment of silicon photonics 31
1.9 Manufacturing challenges 32

2 INTRODUCTION TO SILICON PHOTONICS 34
2.1 What is Silicon Photonics? 35
2.1.1 Definition and Principles of Silicon Photonics 35
2.1.2 Comparison with traditional technologies 35
2.1.3 Silicon and Photonic Integrated Circuits 36
2.1.4 Optical IO, Coupling and Couplers 37
2.1.5 Emission and Photon Sources/Lasers 38
2.1.6 Detection and Photodetectors 38
2.1.7 Compound Semiconductor Lasers and Photodetectors (III-V) 38
2.1.8 Modulation, Modulators, and Mach-Zehnder Interferometers 39
2.1.9 Light Propagation and Waveguides 40
2.1.10 Optical Component Density 41
2.2 Advantages of Silicon Photonics 42
2.3 Applications of Silicon Photonics 43
2.4 Comparison with Other Photonic Integration Technologies 43
2.5 Evolution from Electronic to Photonic Integration 44
2.6 Silicon Photonics vs Traditional Electronics 45
2.7 Modern high-performance AI data centers 45
2.8 Core Technology Components 48
2.8.1 Optical IO, Coupling and Couplers 48
2.8.2 Emission and Photon Sources/Lasers 49
2.8.2.1 III-V Integration Challenges 50
2.8.2.2 Laser Integration Approaches 50
2.8.3 Detection and Photodetectors 50
2.8.4 Modulation Technologies 51
2.8.4.1 Mach-Zehnder Interferometers 51
2.8.4.2 Ring Modulators 52
2.8.5 Light Propagation and Waveguides 52

© Future Markets, Inc 2024. All rights reserved.

2.8.6 Optical Component Density 53
2.9 Basic Optical Data Transmission 53
2.10 Silicon Photonic Circuit Architecture 54

3 MATERIALS AND COMPONENTS 56
3.1 Silicon 56
3.1.1 Silicon as a Photonic Material 56
3.1.1.1 Optical Properties of Silicon 56
3.1.1.2 Fabrication Processes for Silicon Photonics 56
3.1.2 Silicon and Silicon-on-insulator (SOI) 57
3.1.2.1 SOI Manufacturing Process 58
3.1.2.2 SOI Performance Benchmarks 61
3.1.2.3 Key SOI Players 61
3.2 Germanium 62
3.2.1 Germanium Integration in Silicon Photonics 62
3.2.2 Germanium Photodetectors 62
3.2.3 Germanium-on-Silicon Modulators 63
3.3 Silicon Nitride 63
3.3.1 Silicon Nitride (SiN) in Photonics Integrated Circuits 63
3.3.2 Optical Properties and Fabrication of SiN 65
3.3.3 SiN Modulator Technologies 66
3.3.4 SiN Applications in Photonics Integrated Circuits 66
3.3.5 Advances in SiN Modulator Technologies 67
3.3.6 SiN-based Waveguides and Devices 67
3.3.7 SiN Performance Analysis 68
3.3.8 Applications of SiN in Photonics 69
3.3.9 SiN PIC Players 69
3.4 Thin Film Lithium Niobate 70
3.4.1 Lithium Niobate on Insulator (LNOI) 71
3.4.1.1 Overview of LNOI Technology 71
3.4.1.2 Characteristics and Properties of LNOI 72
3.4.1.3 LNOI Fabrication Processes 72
3.4.1.4 LNOI-based Modulator and Switch Technologies 72
3.4.1.5 Trends Toward Higher Speed and Improved Power Efficiency 73
3.4.1.6 High-Speed LNOI Modulators 73
3.4.1.6.1 Energy-Efficient LNOI Devices 74
3.4.1.6.2 Emerging LNOI Device Technologies 74
3.5 Indium Phosphide 74
3.5.1 Indium Phosphide (InP) Integration 74
3.5.1.1 InP as a Direct Bandgap Semiconductor 75
3.5.1.2 InP-based Active Components 75
3.5.1.3 Hybrid Integration of InP with Silicon Photonics 76
3.5.2 InP PIC Players 76
3.6 Barium Titanite and Rare Earth metals 76
3.6.1 Barium Titanate (BTO) Modulators 77
3.7 Organic Polymer on Silicon 78
3.7.1 Polymer-based Modulators 79

© Future Markets, Inc 2024. All rights reserved.

3.8 Wafer Processing 79
3.8.1 Wafer Sizes by Platform 79
3.8.2 Processing Challenges 80
3.8.3 Yield Management 80
3.9 Hybrid and Heterogeneous Integration 81
3.9.1 Monolithic Integration 81
3.9.2 Hybrid Integration 81
3.9.3 Heterogeneous Integration 82
3.9.4 III-V-on-Silicon 82
3.9.5 Bonding and Die-Attachment Techniques 82
3.9.6 Monolithic versus Hybrid Integration 83

4 ADVANCED PACKAGING TECHNOLOGIES 84
4.1 Evolution of Packaging Technologies 84
4.1.1 Traditional Packaging Approaches 87
4.1.2 Advanced Packaging Roadmap 87
4.1.3 Key Performance Metrics 89
4.2 2.5D Integration Technologies 90
4.2.1 Silicon Interposer Technology 91
4.2.2 Glass Interposer Solutions 92
4.2.3 Organic Substrate Options 92
4.3 3D Integration Approaches 93
4.3.1 Through-Silicon Via (TSV) 93
4.3.1.1 TSV Manufacturing Process 94
4.3.1.2 TSV Challenges and Solutions 95
4.3.2 Hybrid Bonding Technologies 96
4.3.2.1 Cu-Cu Bonding 98
4.3.2.2 Direct Bonding 98
4.4 Co-Packaged Optics (CPO) 98
4.4.1 CPO Architecture Overview 98
4.4.2 Benefits and Challenges 99
4.4.3 Integration Approaches 100
4.4.3.1 2D Integration 101
4.4.3.2 2.5D Integration 101
4.4.3.3 3D Integration 101
4.4.4 Thermal Management 102
4.4.5 Optical Coupling Solutions 102
4.5 Optical Alignment 103
4.5.1 Active vs Passive Alignment 103
4.5.2 Coupling Efficiency 104
4.6 Manufacturing Challenges 104

5 MARKETS AND APPLICATIONS 106
5.1 Datacom Applications 106
5.1.1 Data Center Architecture Evolution 108
5.1.2 Transceivers 109
5.1.2.1 Integration 110

© Future Markets, Inc 2024. All rights reserved.

5.1.3 Artificial intelligence (AI) and machine learning (ML) 111
5.1.4 Pluggable optics 111
5.1.5 Linear drive and linear pluggable optics (LPO) 113
5.1.6 Interconnects 115
5.1.6.1 PIC-based on-device interconnects 115
5.1.6.2 Advanced Packaging and Co-Packaged Optics 118
5.1.6.2.1 Glass materials 119
5.1.6.2.2 Co-Packaged Optics 120
5.1.6.3 Photonic Engines and Accelerators 126
5.1.6.3.1 Photonic processing for AI 127
5.1.6.3.2 Convergence with software 127
5.1.6.3.3 Photonic field-programmable gate arrays (FPGAs) 128
5.1.6.4 Photonic Integrated Circuits for Quantum Computing 129
5.1.6.4.1 Photonic qubits 129
5.1.7 Optical Transceivers 132
5.1.7.1 Architecture and Operation 133
5.1.7.2 Market Players 133
5.1.7.3 Technology Roadmap 134
5.1.8 Co-Packaged Optics for Switches 134
5.1.8.1 CPO vs Pluggable Solutions 134
5.1.8.2 Power and Performance Benefits 135
5.1.8.3 Implementation Challenges 135
5.1.9 Data Center Networks 136
5.1.10 High-Performance Computing 136
5.1.10.1 On-Device Interconnects 137
5.1.10.2 Chip-to-Chip Communication 137
5.1.10.3 System Architecture Impact 137
5.1.11 Chip-to-Chip and Board-to-Board Interconnects 138
5.1.12 Ethernet Networking 138
5.2 Telecommunications 139
5.2.1 5G/6G Infrastructure 140
5.2.2 Bandwidth Requirements 140
5.2.3 Long-Haul and Metro Networks 141
5.2.4 5G and Fiber-to-the-X (FTTx) Applications 141
5.2.5 Optical Transceivers and Transponders 142
5.3 Sensing Applications 143
5.3.1 Lidar and Automotive Sensing 143
5.3.1.1 Photonic Integrated Circuit-based LiDAR 144
5.3.2 Chemical and Biological Sensing 147
5.3.3 Optical Coherence Tomography 149
5.4 Artificial Intelligence and Machine Learning 149
5.4.1 AI Data Traffic Requirements 150
5.4.2 Silicon Photonics for AI Accelerators 150
5.4.3 Neural Network Applications 151
5.4.4 Future AI Architecture Requirements 152
5.5 Emerging Applications 152

© Future Markets, Inc 2024. All rights reserved.

5.5.1 Quantum Computing and Communication 152
5.5.1.1 Quantum Photonic Requirements 152
5.5.1.2 Integration Challenges 153
5.5.1.3 Market Players and Development 153
5.5.2 Neuromorphic Computing 154
5.5.3 Biophotonics and Medical Diagnostics 154

6 GLOBAL MARKET SIZE 156
6.1 Global Silicon Photonics Market Overview 156
6.1.1 Market Size and Growth Trends 156
6.1.2 Market Segmentation by Application 157
6.2 Datacom Applications 159
6.2.1 Market Forecast 2023-2035 159
6.2.2 Key Drivers and Restraints 160
6.3 Telecom Applications 160
6.3.1 Market Forecast 2023-2035 160
6.3.2 Key Drivers and Restraints 162
6.4 Sensing Applications 162
6.4.1 Market Forecast 2023-2035 162
6.4.2 Key Drivers and Restraints 163

7 SUPPLY CHAIN ANALYSIS 166
7.1 Foundries and Wafer Suppliers 166
7.1.1 CMOS Foundries 166
7.1.2 Specialty Photonics Foundries 167
7.2 Integrated Device Manufacturers (IDMs) 168
7.2.1 Fabless Companies 168
7.2.2 Fully Integrated Photonics Companies 169
7.3 Foundries and Wafer Suppliers 169
7.4 Packaging and Testing 170
7.4.1 Chip-Scale Packaging 170
7.4.2 Module-Level Packaging 170
7.4.3 Testing and Characterization 171
7.5 System Integrators and End-Users 171

8 TECHNOLOGY TRENDS 173
8.1 Laser Integration Techniques 173
8.1.1 Direct Epitaxial Growth 173
8.1.2 Flip-Chip Bonding 174
8.1.3 Hybrid Integration 174
8.1.4 Advances and Challenges 174
8.2 Modulator Technologies 175
8.2.1 Silicon Modulators 176
8.2.2 Germanium Modulators 176
8.2.3 Lithium Niobate Modulators 176
8.2.4 Polymer Modulators 176
8.3 Photodetector Technologies 177
8.3.1 Silicon Photodetectors 177

© Future Markets, Inc 2024. All rights reserved.

8.3.2 Germanium Photodetectors 177
8.3.3 III-V Photodetectors 178
8.4 Waveguide and Coupling Innovations 178
8.4.1 Silicon Waveguides 178
8.4.2 Silicon Nitride Waveguides 178
8.4.3 Coupling Techniques 179
8.5 Packaging and Integration Advancements 179
8.5.1 Chip-Scale Packaging 179
8.5.2 Wafer-Scale Integration 180
8.5.3 3D Integration and Interposer Technologies 180

9 CHALLENGES AND FUTURE TRENDS 182
9.1 CMOS-Foundry-Compatible Devices and Integration 182
9.1.1 Scaling and Miniaturization 183
9.1.2 Process Complexity and Yield Improvement 183
9.2 Power Consumption and Thermal Management 184
9.2.1 Energy-Efficient Photonic Devices 185
9.2.2 Thermal Optimization Techniques 186
9.3 Packaging and Testing 186
9.3.1 Advanced Packaging Solutions 186
9.3.2 Automated Testing and Characterization 187
9.4 Scalability and Cost-Effectiveness 188
9.4.1 Wafer-Scale Integration 188
9.4.2 Outsourced Semiconductor Assembly and Test (OSAT) 189
9.5 Emerging Materials and Hybrid Integration 190
9.5.1 Novel Semiconductor Materials 190
9.5.2 Heterogeneous Integration Approaches 191
