TABLE OF CONTENTS

1 INTRODUCTION 21
1.1 Characteristics of SAPs 21
1.2 Classification 23
1.3 Types of superabsorbent materials 23
1.3.1 Non-biodegradable, fossil-based SAPs 24
1.3.2 Biodegradable, fossil-based SAPs 25
1.4 Working principles and mechanisms 26
1.4.1 Cross-linking agents 28
1.4.2 Water absorbing mechanism of SAPs 29
1.5 Key performance metrics 30
1.6 Manufacturing processes 30
1.7 Value chain analysis 32
1.8 Regulatory landscape 33
2 TYPES OF SUPERABSORBENT POLYMERS 35
2.1 Synthetic Superabsorbent Polymers 36
2.1.1 Sodium polyacrylate 36
2.1.1.1 Chemical structure and properties 36
2.1.1.2 Synthesis methods 37
2.1.1.3 Absorption mechanisms 37
2.1.1.4 Performance characteristics 38
2.1.1.5 Commercial grades and specifications 39
2.1.1.6 Market applications 39
2.1.2 Polyacrylamide copolymers 40
2.1.2.1 Types and compositions 40
2.1.2.2 Cross-linking mechanisms 40
2.1.2.3 Synthesis routes 40
2.1.2.4 Performance metrics 41
2.1.2.5 Application-specific grades 41
2.1.2.6 Market positioning 41
2.1.3 Polyvinyl alcohol copolymers 42

2.1.3.1 Molecular structure 42
2.1.3.2 Manufacturing processes 43
2.1.3.3 Property modification techniques 44
2.1.3.4 Performance characteristics 44
2.1.3.5 Application areas 45
2.1.4 Other synthetic polymers 46
2.1.4.1 Poly(vinyl pyrrolidone) 46
2.1.4.2 Polyethylene oxide derivatives 46
2.1.4.3 Polyurethane-based materials 46
2.1.4.4 Novel synthetic approaches 47
2.1.4.4.1 Double Network Systems 47
2.1.4.4.2 Nanocomposite SAPs 47
2.1.4.4.3 Bio-based Hybrid SAPs 48
2.1.4.4.4 Stimuli-Responsive SAPs 49
2.1.4.4.5 Microporous Networks 49
2.1.4.4.6 Surface Modified SAPs 49
2.1.4.4.7 Zero-monomer SAPs 49
2.1.4.4.8 Reversible Cross-linking 49
2.1.4.4.9 Multi-functional SAPs 50
2.1.4.4.10 Dendrimeric SAPs 50
2.1.4.5 Emerging materials 51
2.1.4.5.1 Zwitterionic Polymers 51
2.1.4.5.2 Graphene-based SAPs 51
2.1.4.5.3 Self-healing SAPs 52
2.1.4.5.4 Biodegradable Synthetics 53
2.1.4.5.5 Thermo-responsive SAPs 53
2.1.4.5.6 pH-selective SAPs 53
2.1.4.5.7 Magnetic Responsive SAPs 54
2.1.4.5.8 Shape Memory SAPs 54
2.1.4.5.9 Photonic SAPs 54
2.1.4.5.10 Conductive SAPs 54
2.2 Natural and Bio-based Superabsorbents 55
2.2.1 Modified starches 56

2.2.1.1 Sources and types 56
2.2.1.2 Modification methods 57
2.2.1.3 Property enhancement 58
2.2.1.4 Performance characteristics 58
2.2.1.5 Environmental benefits 58
2.2.1.6 Cost analysis 59
2.2.2 Cellulose-based materials 59
2.2.2.1 Types of cellulose derivatives 61
2.2.2.2 Manufacturing processes 61
2.2.2.3 Cross-linking methods 61
2.2.2.4 Performance metrics 62
2.2.2.5 Environmental impact 62
2.2.2.6 Market applications 63
2.2.3 Chitosan derivatives 63
2.2.3.1 Source materials 63
2.2.3.2 Modification techniques 64
2.2.3.3 Property profiles 64
2.2.3.4 Application areas 65
2.2.4 Alginate compounds 65
2.2.4.1 Types and sources 65
2.2.4.2 Processing methods 66
2.2.4.3 Performance characteristics 66
2.2.4.4 Application development 66
2.2.4.5 Market opportunities 67
2.2.5 Plant-based superabsorbents 67
2.2.5.1 Natural sources 67
2.2.5.2 Extraction methods 67
2.2.5.3 Modification techniques 68
2.2.5.4 Sustainability aspects 68
2.2.5.5 Market potential 68
2.2.6 Protein-based SAPs 68
2.2.7 Homo poly(amino acid)-based SAPs 69

2.2.8 Other natural and bio-based materials 69
2.3 Composite Superabsorbent Materials 70
2.3.1 Clay-polymer composites 70
2.3.1.1 Types of clay minerals 70
2.3.1.2 Synthesis methods 70
2.3.1.3 Property enhancement 71
2.3.1.4 Performance characteristics 71
2.3.1.5 Cost-benefit analysis 71
2.3.1.6 Market applications 72
2.3.2 Nanocellulose composites 72
2.3.2.1 Types of nanocellulose 73
2.3.2.2 Fabrication methods 74
2.3.2.3 Performance metrics 75
2.3.2.4 Application areas 76
2.3.2.5 Future prospects 76
2.3.3 Graphene-based composites 76
2.3.3.1 Material types 76
2.3.3.2 Synthesis routes 77
2.3.3.3 Property enhancement 77
2.3.3.4 Performance characteristics 77
2.3.3.5 Market potential 78
2.3.3.6 Cost considerations 78
2.4 Novel and Emerging Materials 78
2.4.1 Smart superabsorbents 79
2.4.1.1 Response mechanisms 79
2.4.1.2 Types and categories 79
2.4.1.3 Performance characteristics 79
2.4.1.4 Application development 80
2.4.1.5 Market potential 80
2.4.2 Stimuli-responsive materials 80
2.4.2.1 Response types 80
2.4.2.2 Design principles 81
2.4.2.3 Performance metrics 81

© Future Markets, Inc. 2025

2.4.2.4 Application areas 81
2.4.3 Biodegradable synthetics 81
2.4.3.1 Material types 82
2.4.3.2 Degradation mechanisms 82
2.4.3.3 Performance characteristics 82
2.4.3.4 Environmental impact 83
2.4.3.5 Market opportunities 83
3 MANUFACTURING AND PRODUCTION 84
3.1 Production Methods 84
3.1.1 Solution polymerization 84
3.1.1.1 Process parameters and controls 84
3.1.1.2 Equipment requirements 85
3.1.1.3 Batch vs continuous processing 85
3.1.1.4 Yield optimization 86
3.1.1.5 Quality control points 86
3.1.1.6 Energy consumption 86
3.1.1.7 Cost analysis 86
3.1.2 Suspension polymerization 87
3.1.2.1 Process conditions 87
3.1.2.2 Stabilizer systems 87
3.1.2.3 Particle size control 87
3.1.2.4 Equipment specifications 87
3.1.2.5 Process optimization 88
3.1.2.6 Production rates 88
3.1.2.7 Cost considerations 88
3.1.3 Bulk polymerization 88
3.1.3.1 Process variables 88
3.1.3.2 Heat management 89
3.1.3.3 Conversion rates 89
3.1.3.4 Equipment needs 89
3.1.3.5 Scale-up considerations 90
3.1.3.6 Production efficiency 90

3.1.3.7 Economic analysis 90
3.1.4 Grafting methods 91
3.1.4.1 Substrate preparation 91
3.1.4.2 Process controls 91
3.1.4.3 Equipment requirements 91
3.1.4.4 Yield optimization 91
3.1.4.5 Cost factors 92
3.2 Raw Materials 92
3.2.1 Monomers and crosslinkers 92
3.2.1.1 Types and specifications 92
3.2.1.2 Quality requirements 93
3.2.1.3 Cost trends 93
3.2.1.4 Environmental considerations 93
3.2.2 Initiators and catalysts 93
3.2.2.1 Types and selection criteria 93
3.2.2.2 Performance impact 94
3.2.2.3 Cost analysis 94
3.2.3 Natural raw materials 94
3.2.3.1 Sources and availability 94
3.2.3.2 Processing requirements 95
3.2.3.3 Quality variations 95
3.2.3.4 Cost implications 95
3.3 Production Capacities 95
3.4 Manufacturing Costs 96
3.5 Quality Control and Testing 97
4 MARKETS AND APPLICATIONS 98
4.1 Personal Hygiene Products 98
4.1.1 Baby diapers 98
4.1.1.1 Product requirements 98
4.1.1.2 Material specifications 99
4.1.1.3 Market size by region 99
4.1.1.4 Growth drivers 100
4.1.1.5 Technology trends 101

© Future Markets, Inc. 2025

4.1.1.6 Cost analysis 102
4.1.2 Adult incontinence products 102
4.1.2.1 Regional demand 102
4.1.2.2 Growth factors 104
4.1.2.3 Manufacturing considerations 104
4.1.2.4 Market opportunities 104
4.1.3 Feminine hygiene products 104
4.1.3.1 Product categories 104
4.1.3.2 Material requirements 105
4.1.3.3 Market dynamics 105
4.1.3.4 Growth trends 105
4.1.3.5 Future outlook 105
4.1.4 Market size (2020-2035) 106
4.2 Agricultural Applications 106
4.2.1 Water retention in soils 107
4.2.1.1 Application methods 107
4.2.1.2 Performance metrics 108
4.2.1.3 Cost-benefit analysis 109
4.2.1.4 Market adoption 109
4.2.2 Controlled release fertilizers 109
4.2.3 Seed coating 110
4.2.4 Market trends 111
4.2.5 Market size (2020-2025) 112
4.3 Medical and Healthcare 113
4.3.1 Wound dressings 114
4.3.2 Drug delivery systems 115
4.3.3 Medical devices 115
4.3.4 Tissue Engineering 115
4.3.5 Market dynamics 115
4.3.6 Regulatory considerations 115
4.3.7 Market size (2020-2025) 116
4.4 Industrial Applications 117

4.4.1 Cable water blocking 118
4.4.2 Construction materials 118
4.4.2.1 Fiber concrete 119
4.4.3 Packaging 120
4.4.4 Water treatment 121
4.4.5 Oil spill treatment 121
4.4.6 Market size (2020-2025) 122
4.5 Emerging Applications 124
4.5.1 Smart textiles 124
4.5.2 Environmental remediation 125
4.5.3 Energy storage 126
4.5.4 Food packaging 127
4.5.5 Future prospects 128
5 MARKET ANALYSIS 131
5.1 Global Market Size and Growth 131
5.1.1 Current market status 131
5.1.2 Market forecasts 2024-2035 132
5.1.2.1 Revenues 132
5.1.2.2 Metric tons 132
5.2 Regional Markets 133
5.2.1 North America 134
5.2.2 Europe 135
5.2.3 Asia Pacific 136
5.2.4 Latin America 137
5.2.5 Middle East and Africa 137
5.3 Market Drivers and Trends 138
5.4 Market Challenges 138
6 SUSTAINABILITY AND ENVIRONMENTAL IMPACT 140
6.1 Environmental Concerns 140
6.1.1 Biodegradability 140
6.1.2 Microplastic issues 141
6.1.3 Waste management 142

The use of SAP a to change the microstructure, b to increase freeze–thaw resistance, c to induce sealing, and d to provide for healing characteristics in a cementitious material; the materials represented are shown as light grey SAP in a dark grey cementitious matrix with blue water and medium grey healing product formation. 119

Figure 27. (A) Main mechanism of self-healing (B) Changes in self-shrinkage and compressive strength of cement pastes with different particle sizes of SAP powders [. 120

Figure 28. a Experiments for oil recovery using superabsorbent in combination with a skimmer. b Oil recovery through synthetic sorbent with the aid of a pump. c Combination of the pump, sorbents, and heat to recover the heavy oil . d Experiments for oil recovery by using tube-shaped polymers housed in regular sacks. 122
